COMPUTER AIDED ENGINEERING DRAWING

I / II SEMESTER

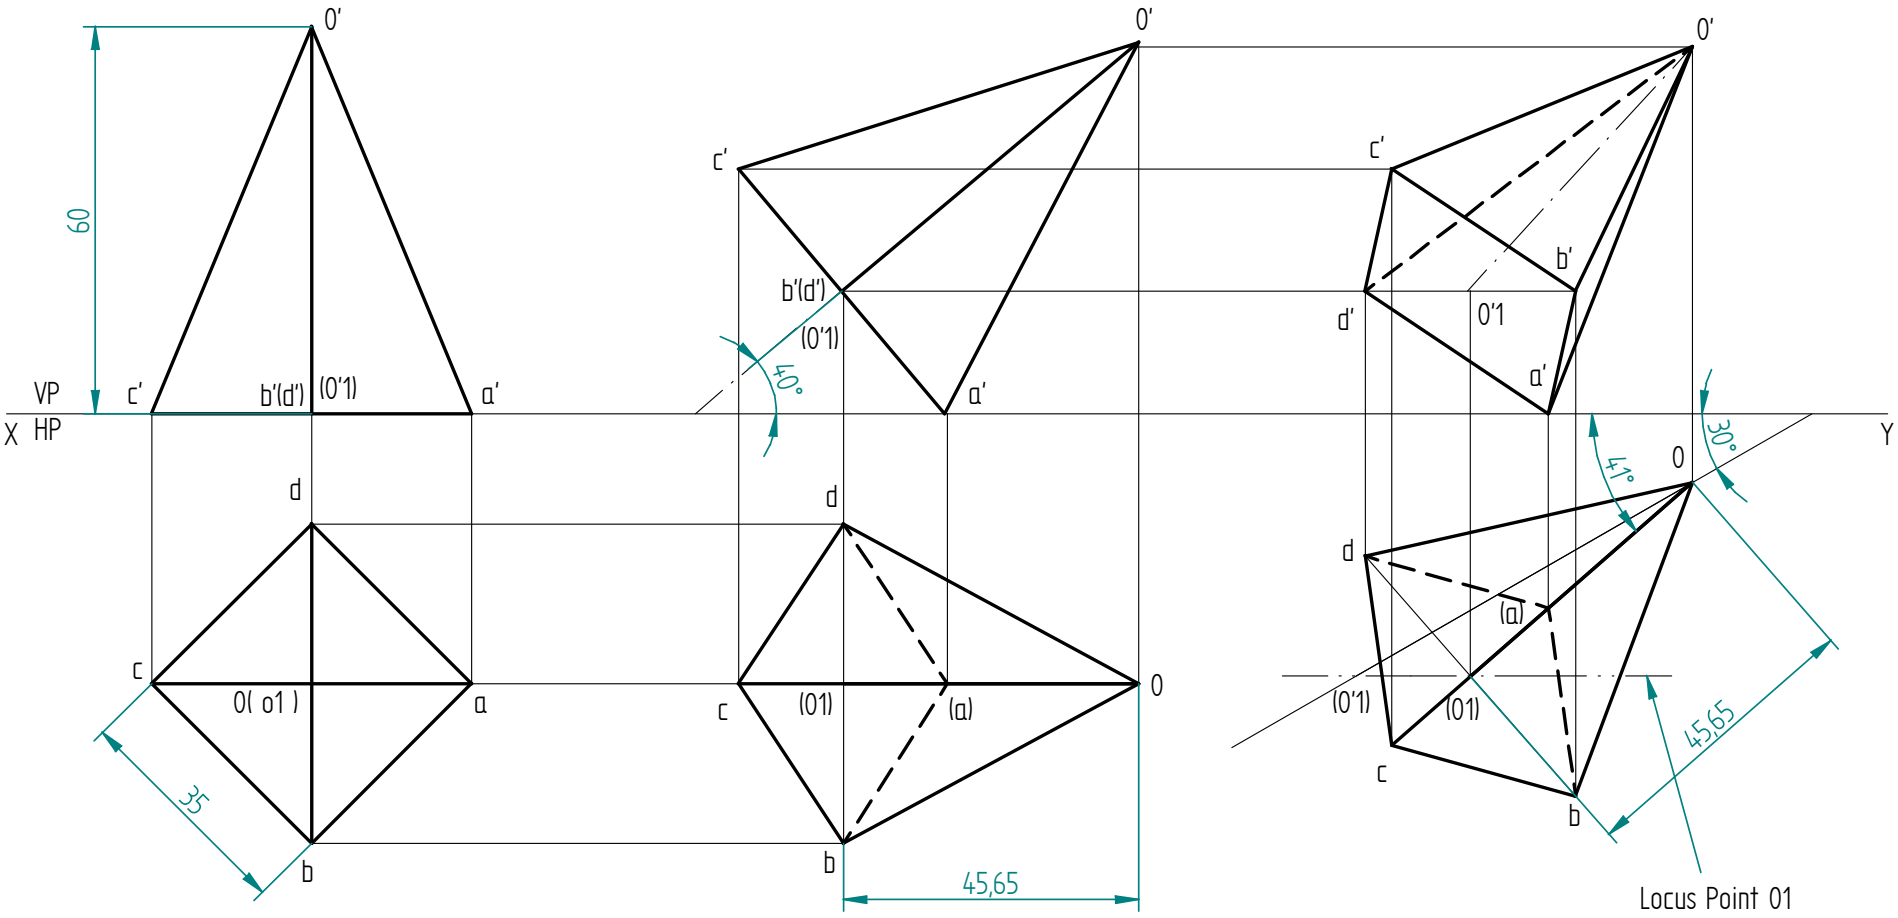

Solutions(Solids)

POOJYA DODDAPPA APPA COLLEGE OF ENGINEERING,
(AUTONOMUS INSTITUTION, AFFILIATED TO VTU BELGAUM)
Aiwan-E-Shahi Area, KALABURAGI-585 102

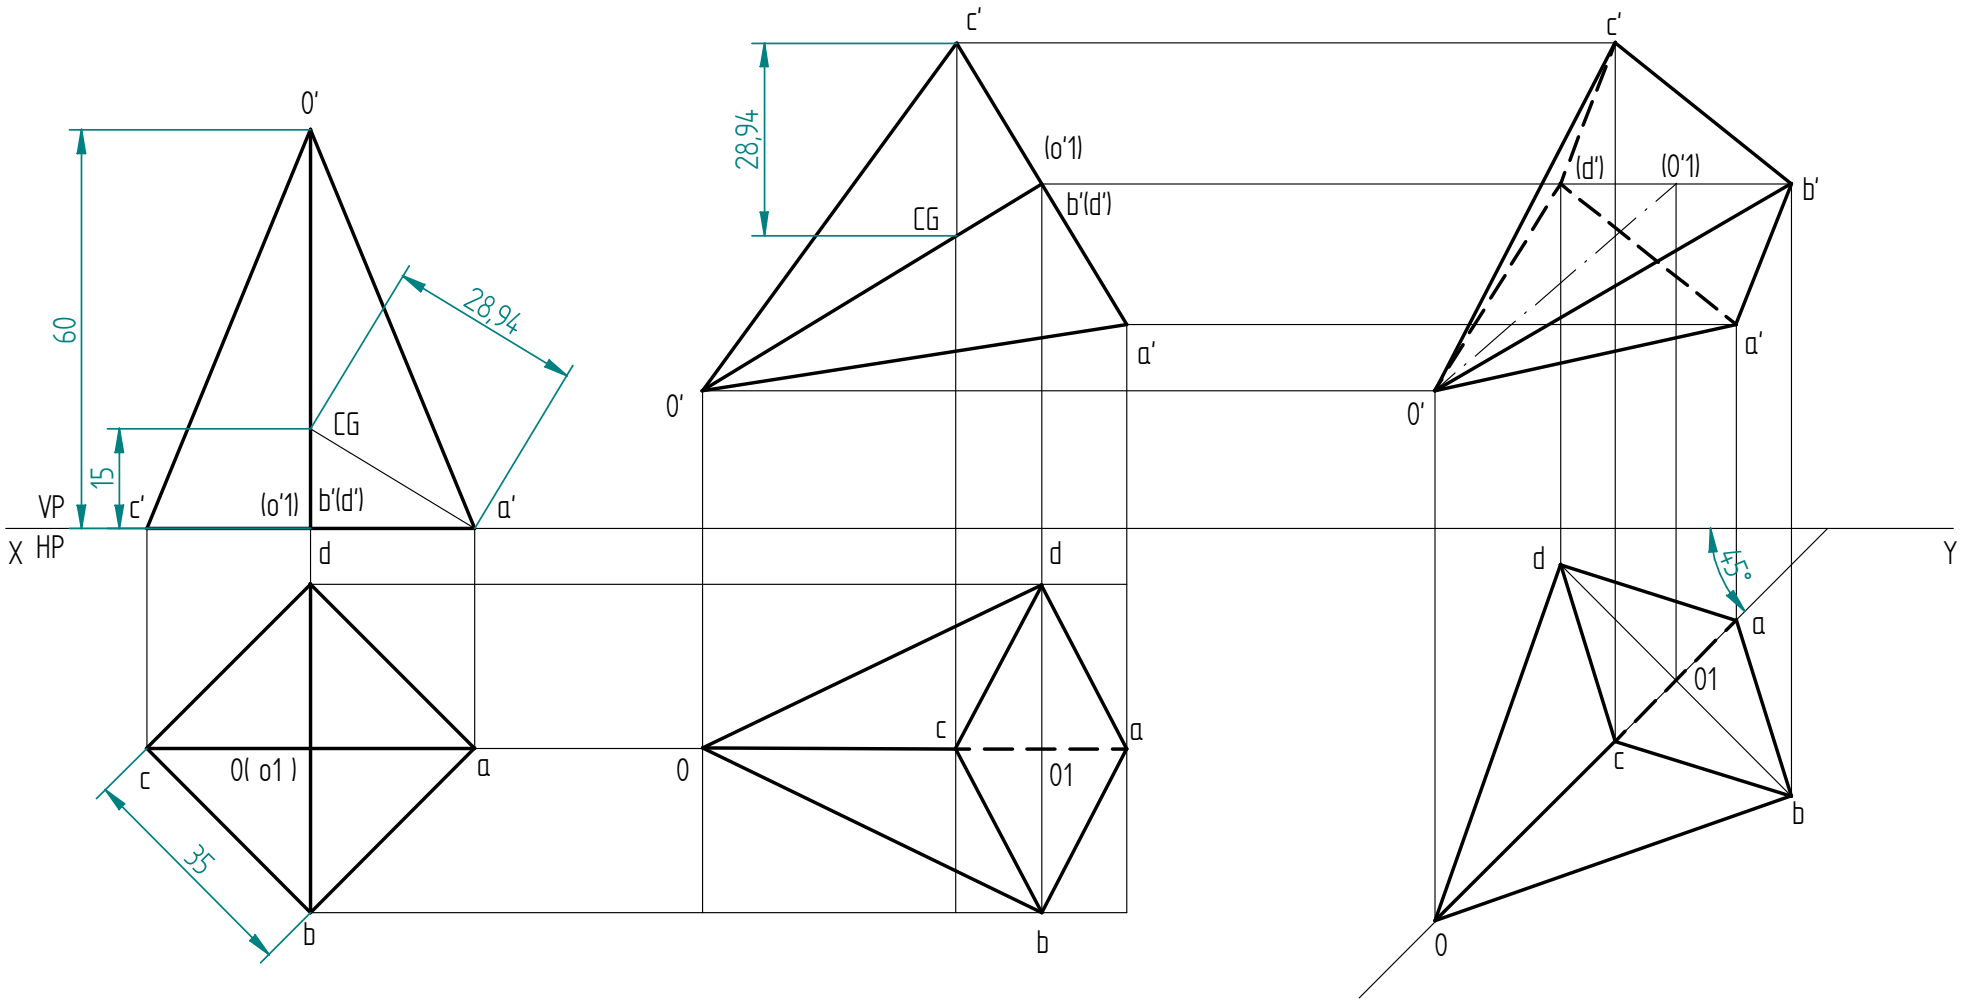

3.1 A square pyramid 35mm sides of base and 60mm axis length rests on HP on one of its edges of the base, which is inclined to VP at 30º. Draw the projections of the pyramid when the axis is inclined to HP at 45º.

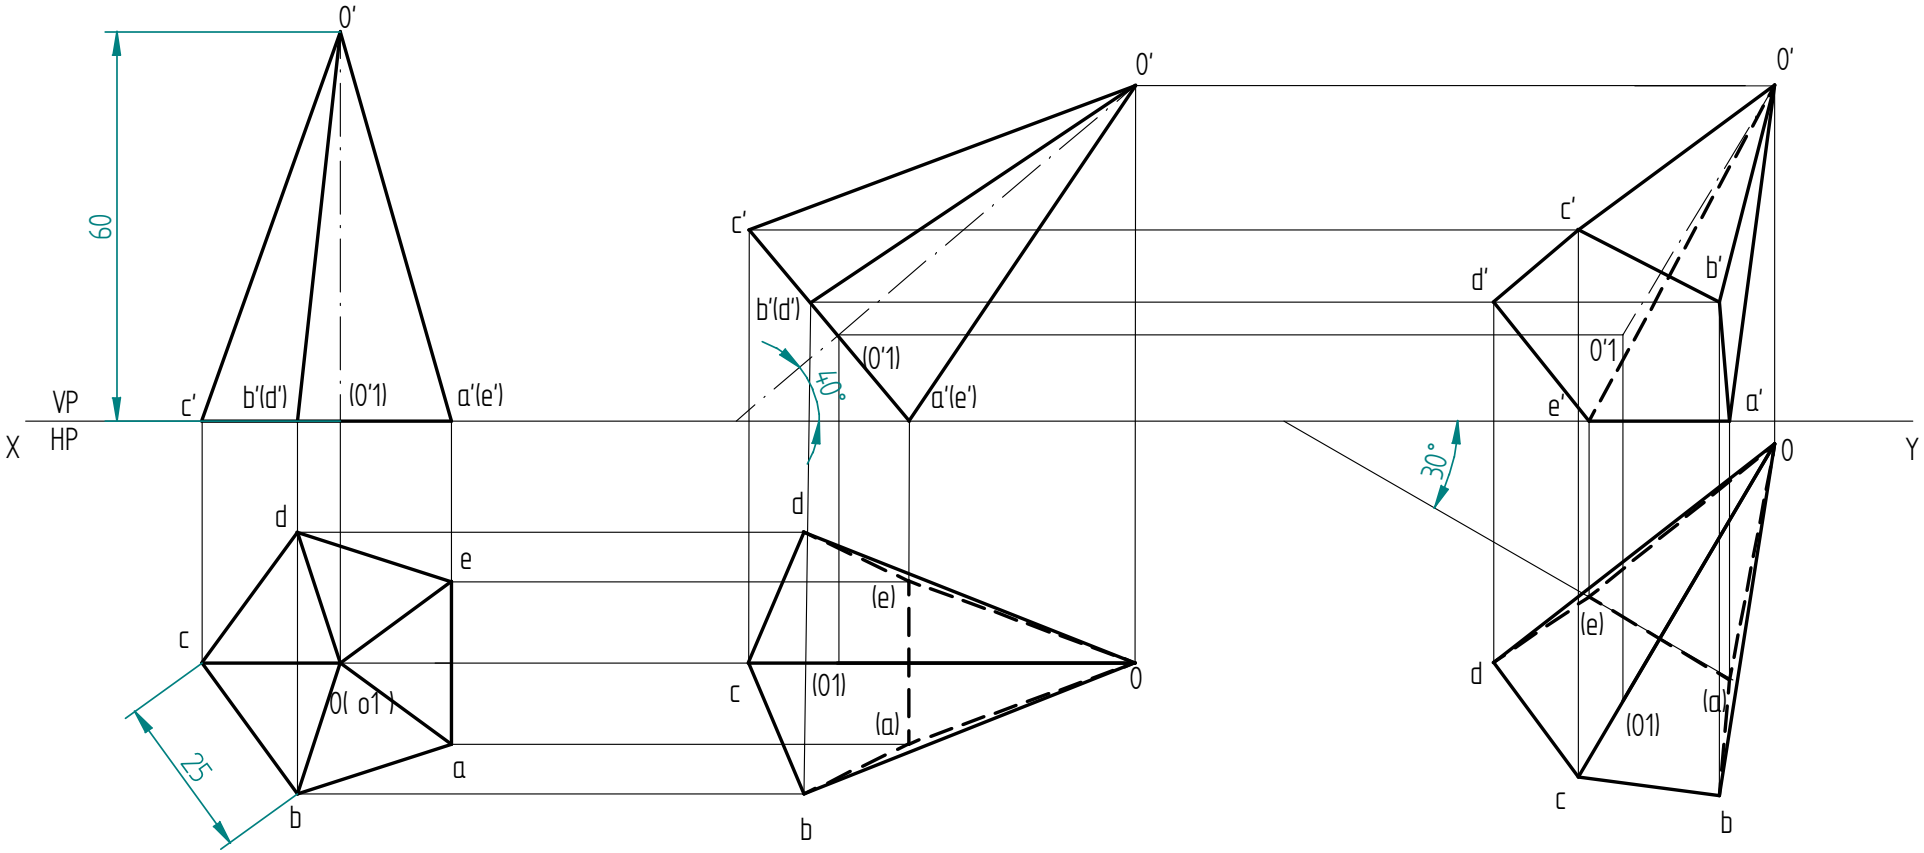

3.2. A square pyramid 35mm sides of base and 60mm axis length rests on HP on one of its corners of the base. Draw the projections of the pyramid, when the axis of the pyramid is inclined to HP at 40º and VP at 30º.

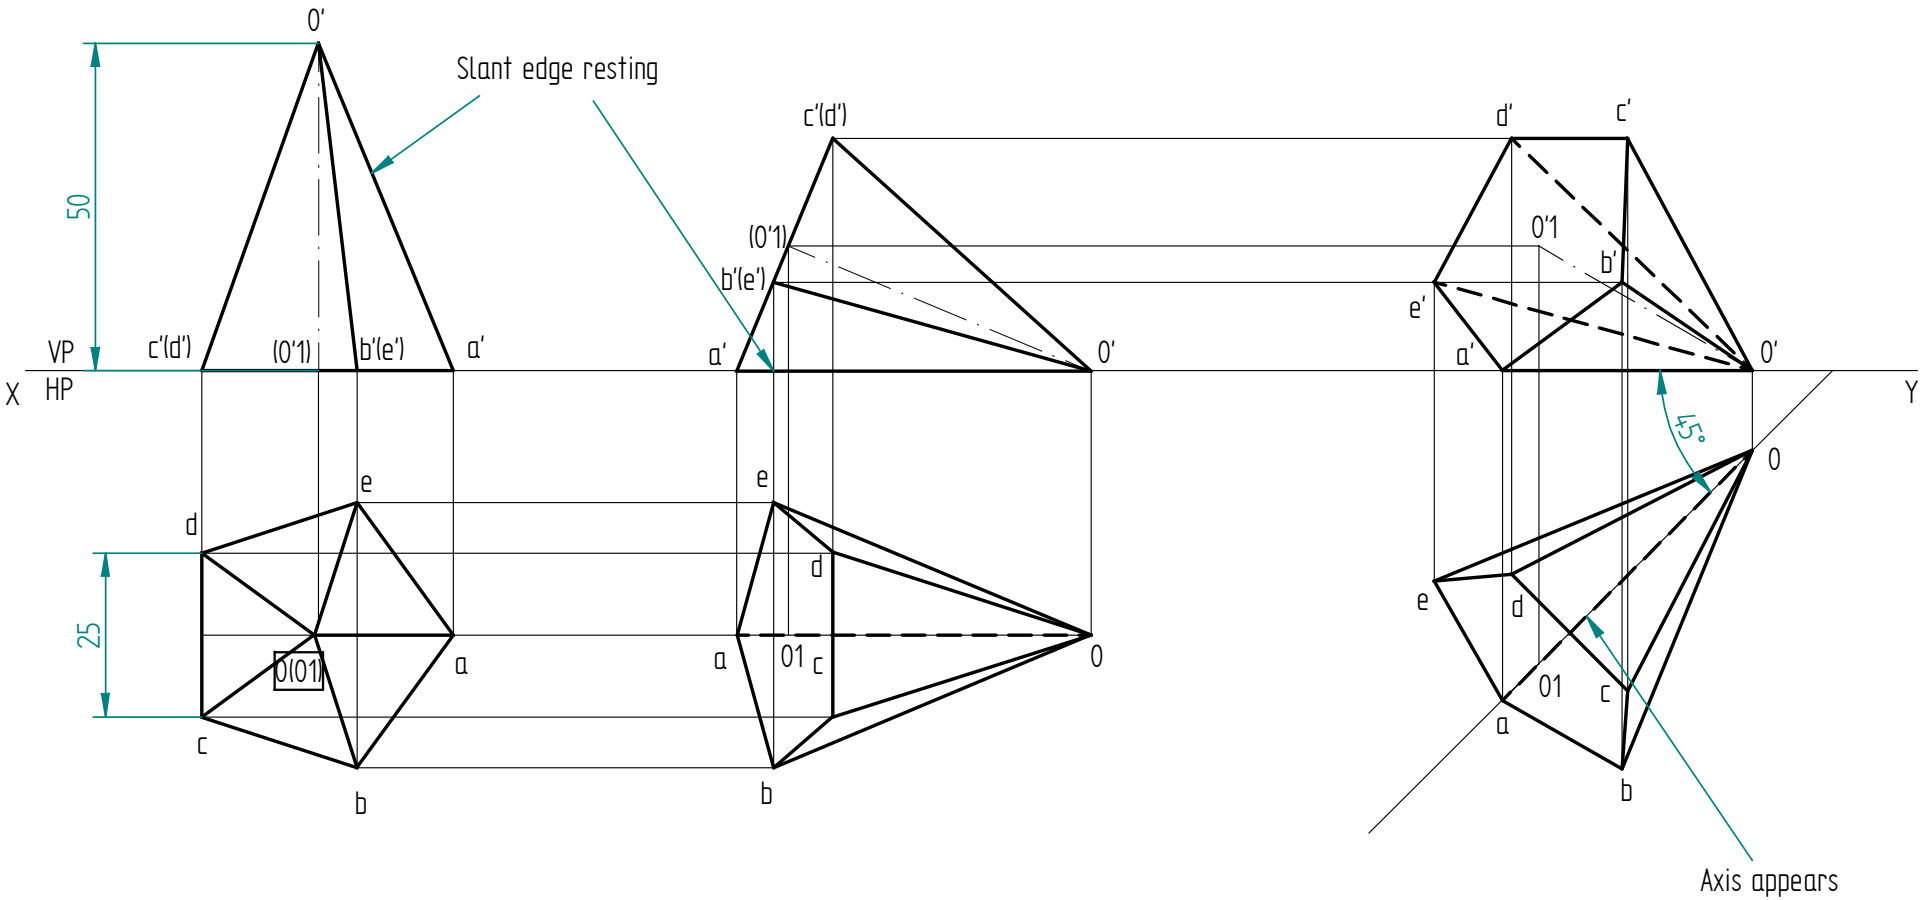

3.3 A square pyramid 35mm sides of base and 60mm axis length is suspended freely from a corner of its base. Draw the projections of the pyramid when the axis appears to be inclined to VP at 45º.

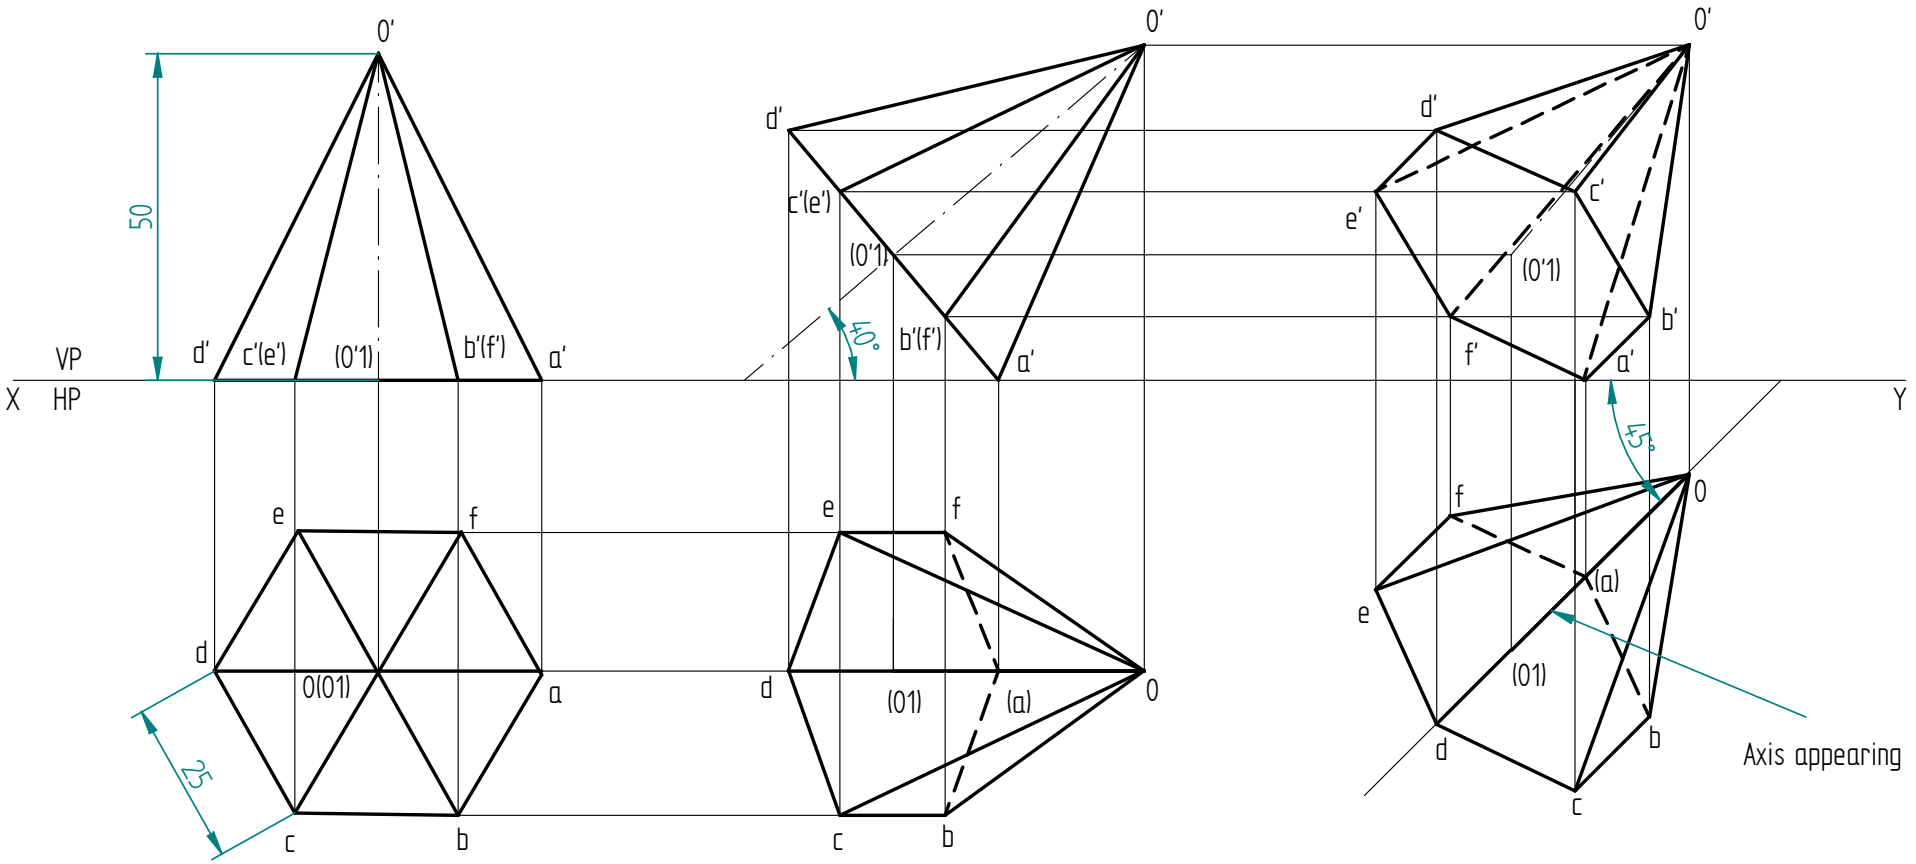

3.4 A pentagonal pyramid 25mm side of base and 60mm axis length rests on HP on one of its edges of the base, which is inclined to VP at 30º. Draw the projections of the pyramid when the axis is inclined to HP at 40º.

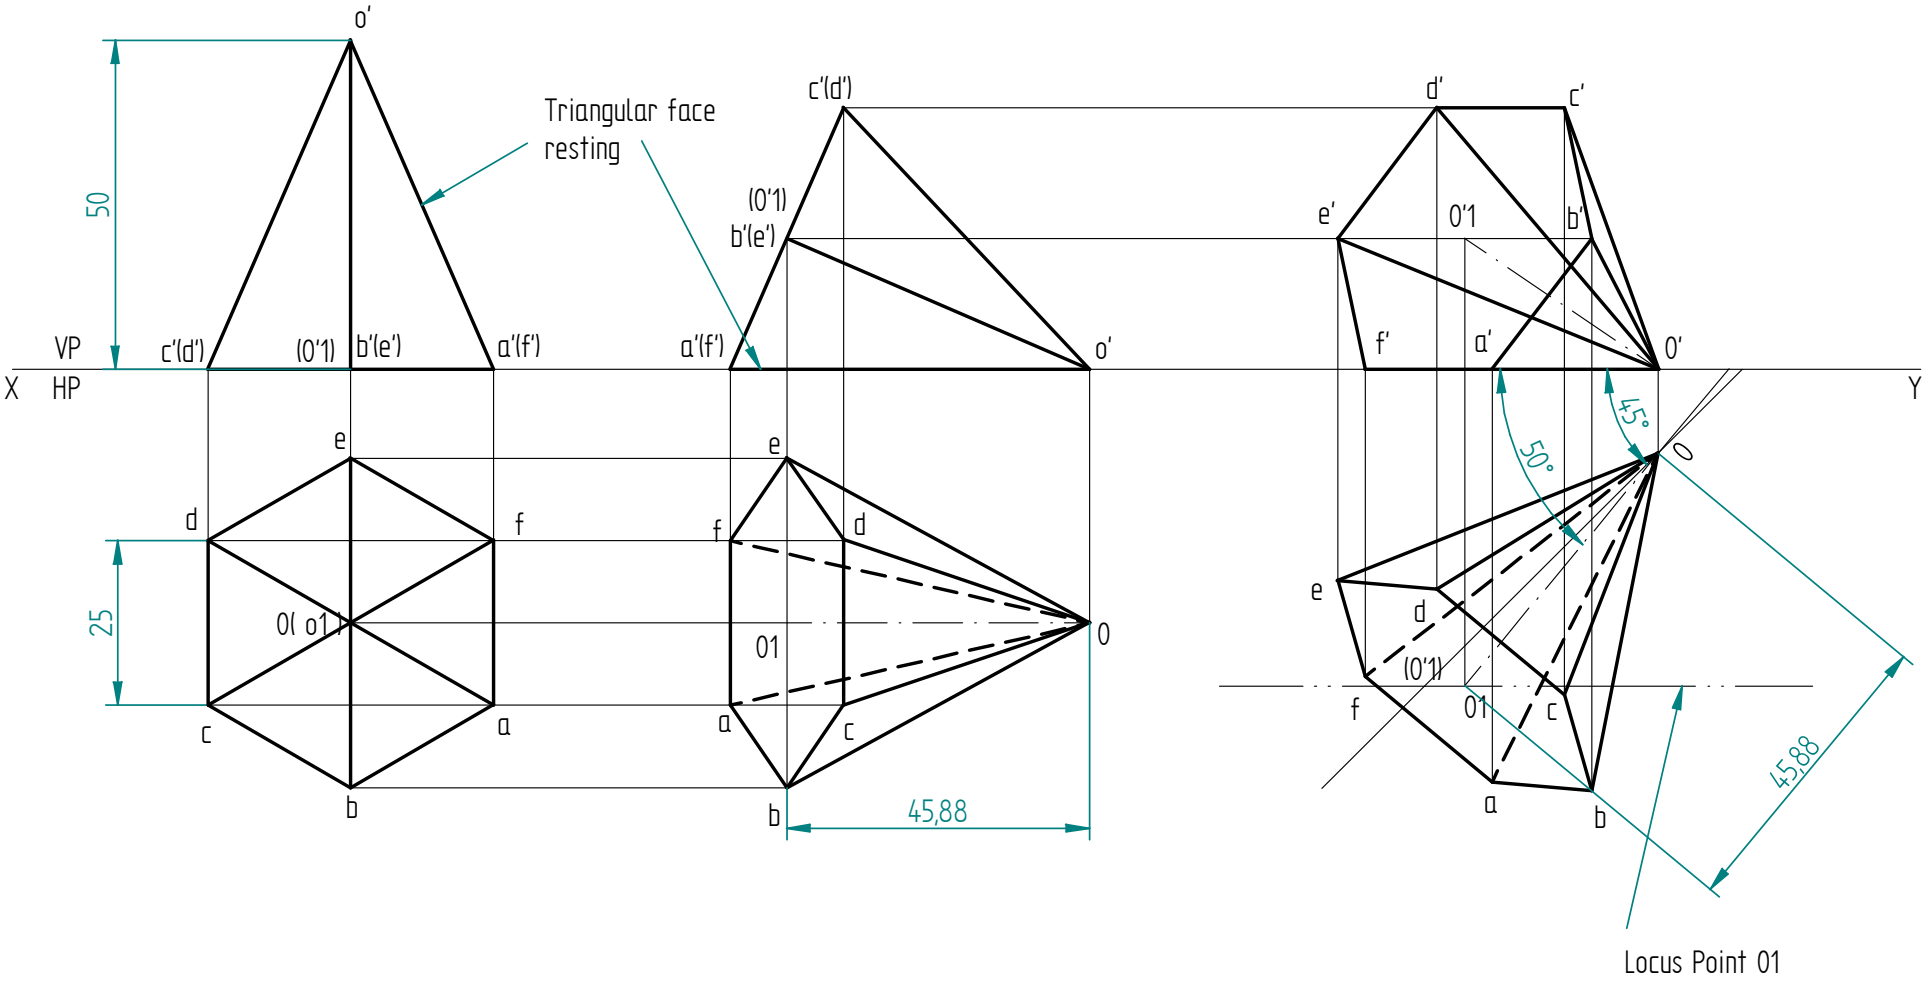

3.5 A pentagonal pyramid 25mm sides of base and 50mm axis length rests on HP on one of its slant edges. Draw the projections of the pyramid when the axis appears to be inclined to VP at 45º.

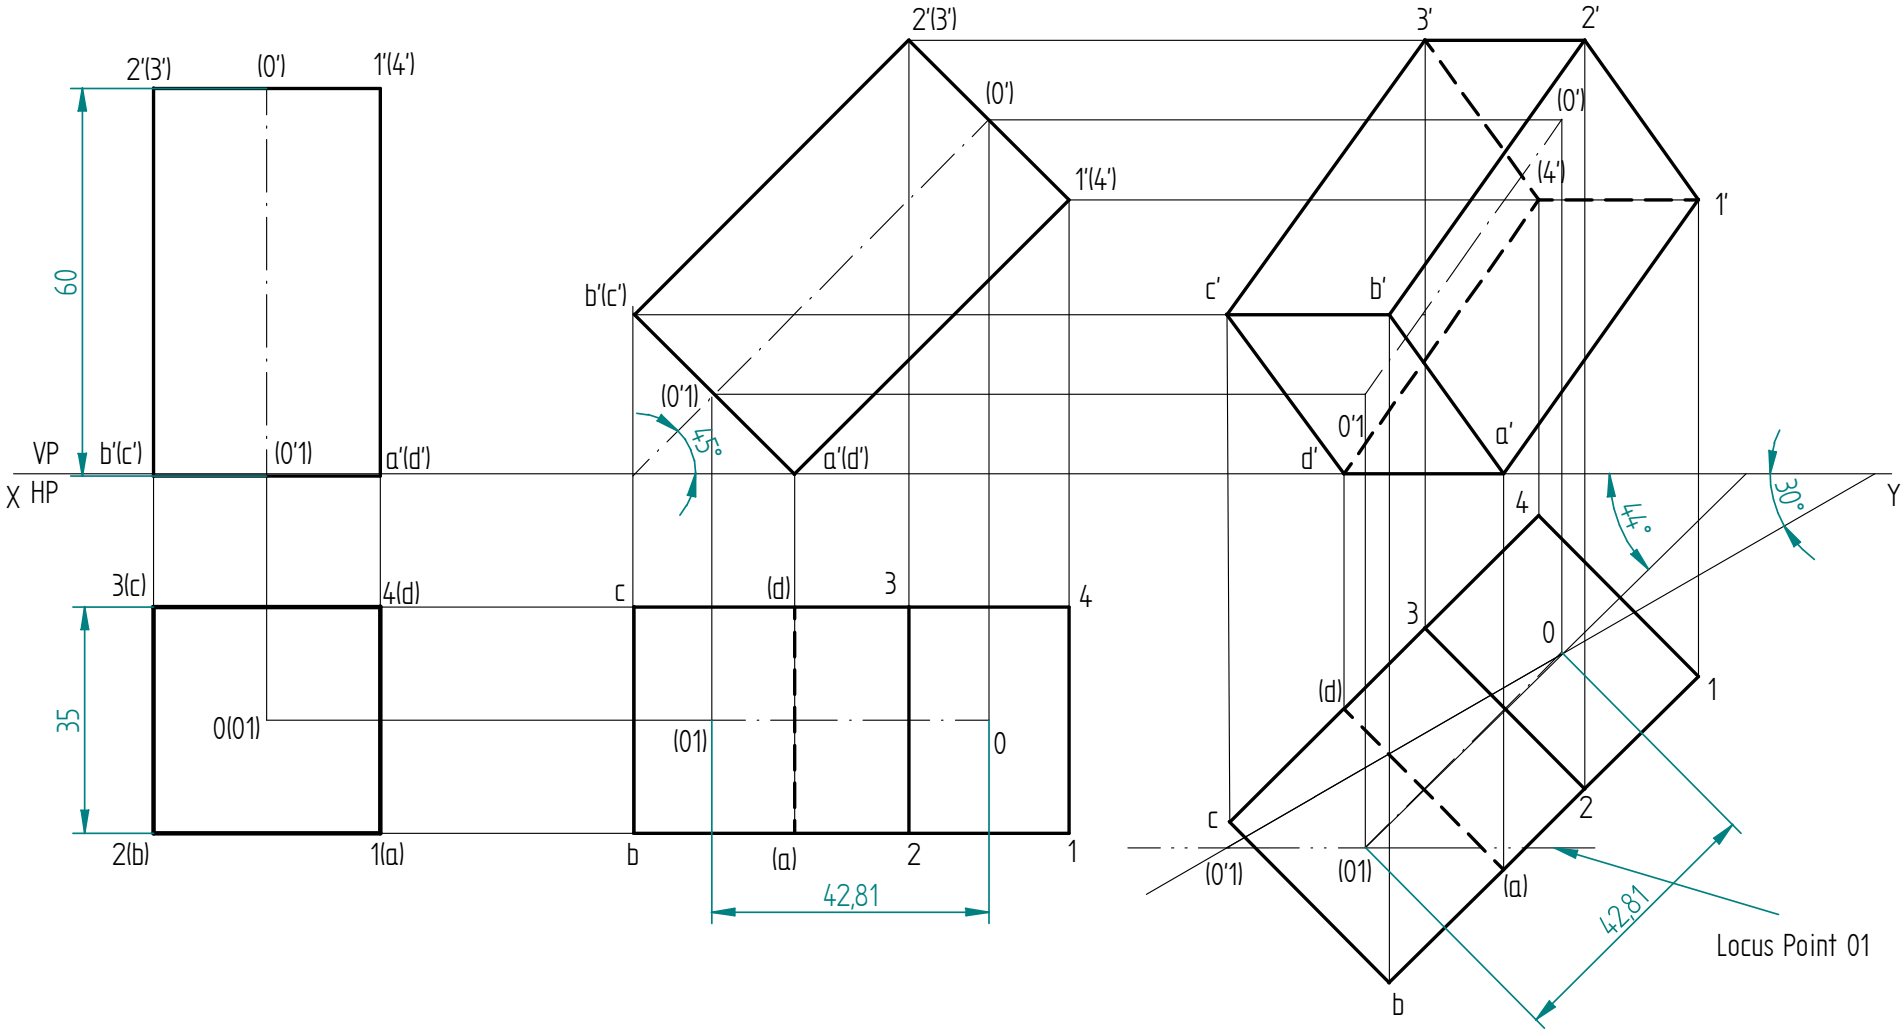

3.6 A hexagonal pyramid 25mm sides of base and 50mm axis length rests on HP on one of its corners of the base. Draw the projections of the pyramid when the axis of the pyramid is inclined to HP at 40º and appears to be inclined to VP 45º.

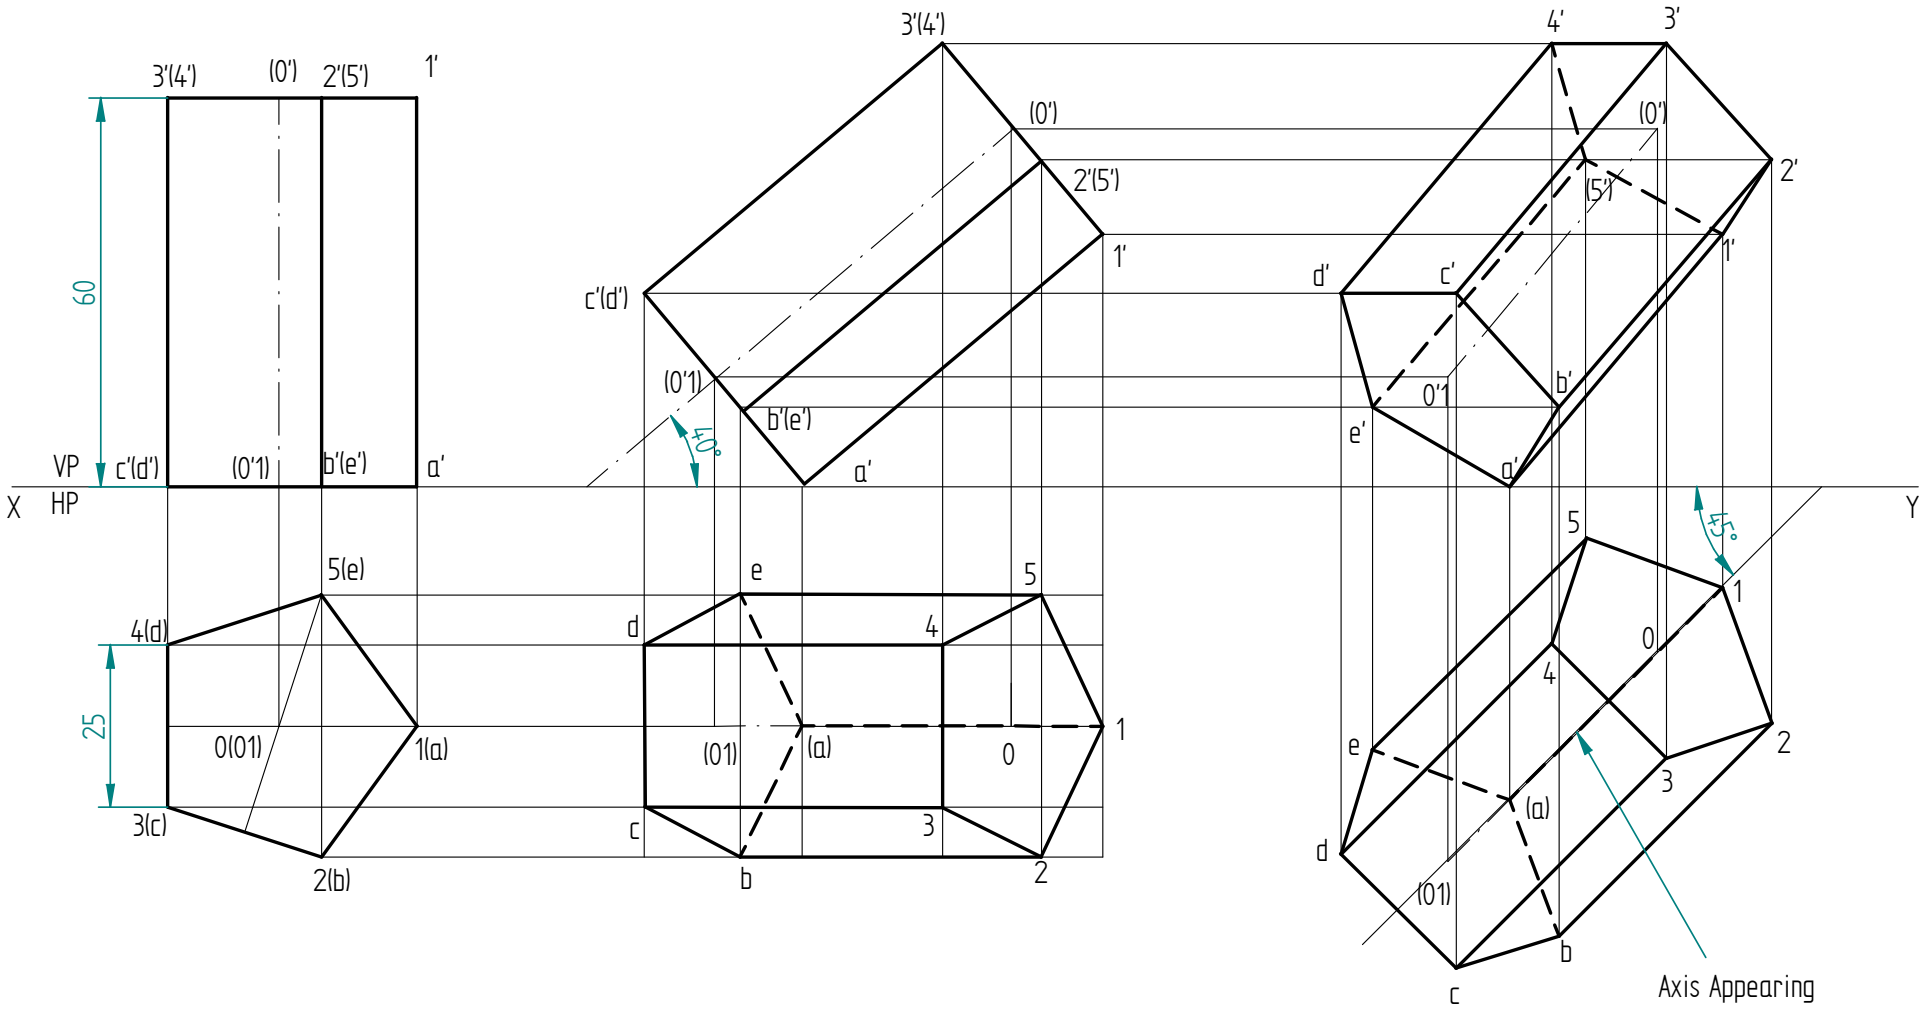

3.7 A hexagonal pyramid 25mm sides of base and 50mm axis length rests on HP on one of its triangular faces. Draw the projections of the pyramid when the axis is inclined to VP at 45º.

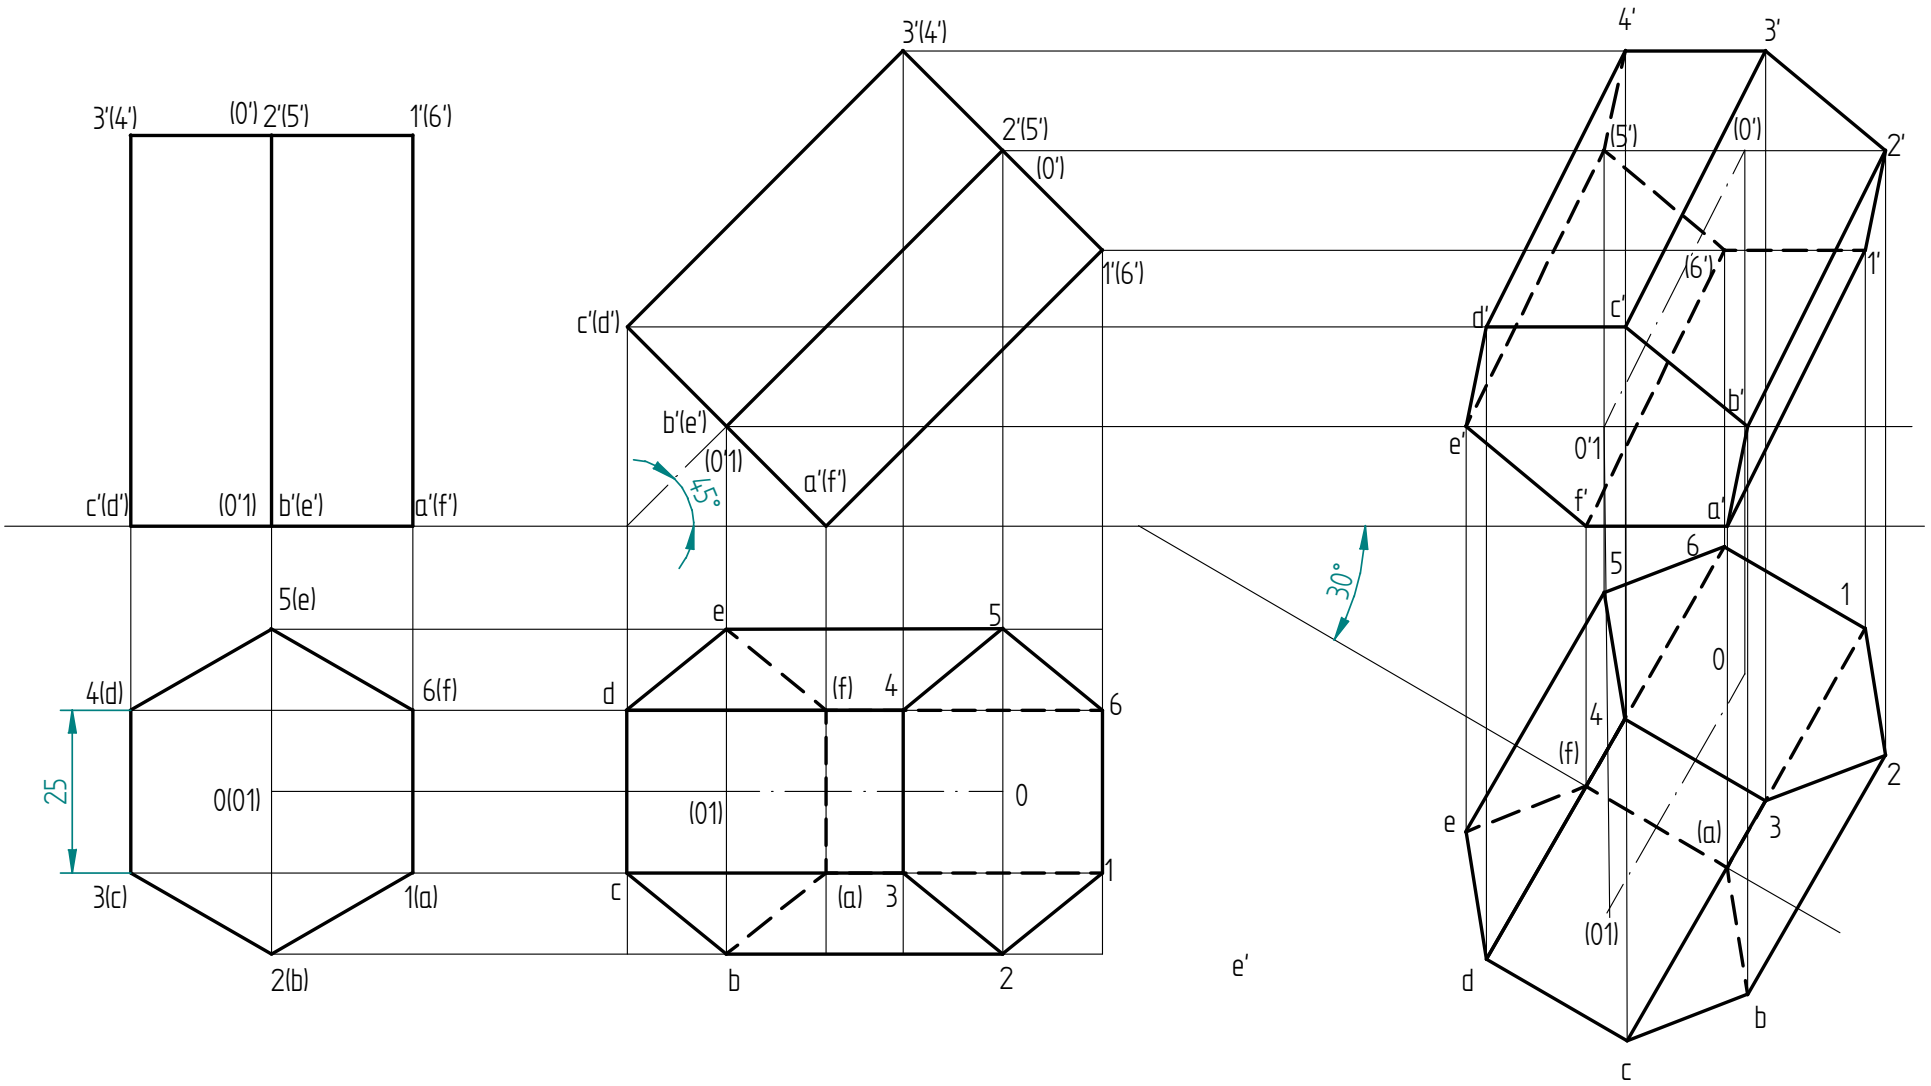

3.8 A square prism 35mm sides of base and 60mm axis length rests on HP on one of its edges of the base. Draw the projections of the prism when the axis is inclined to the HP at 45º and VP at 30º.

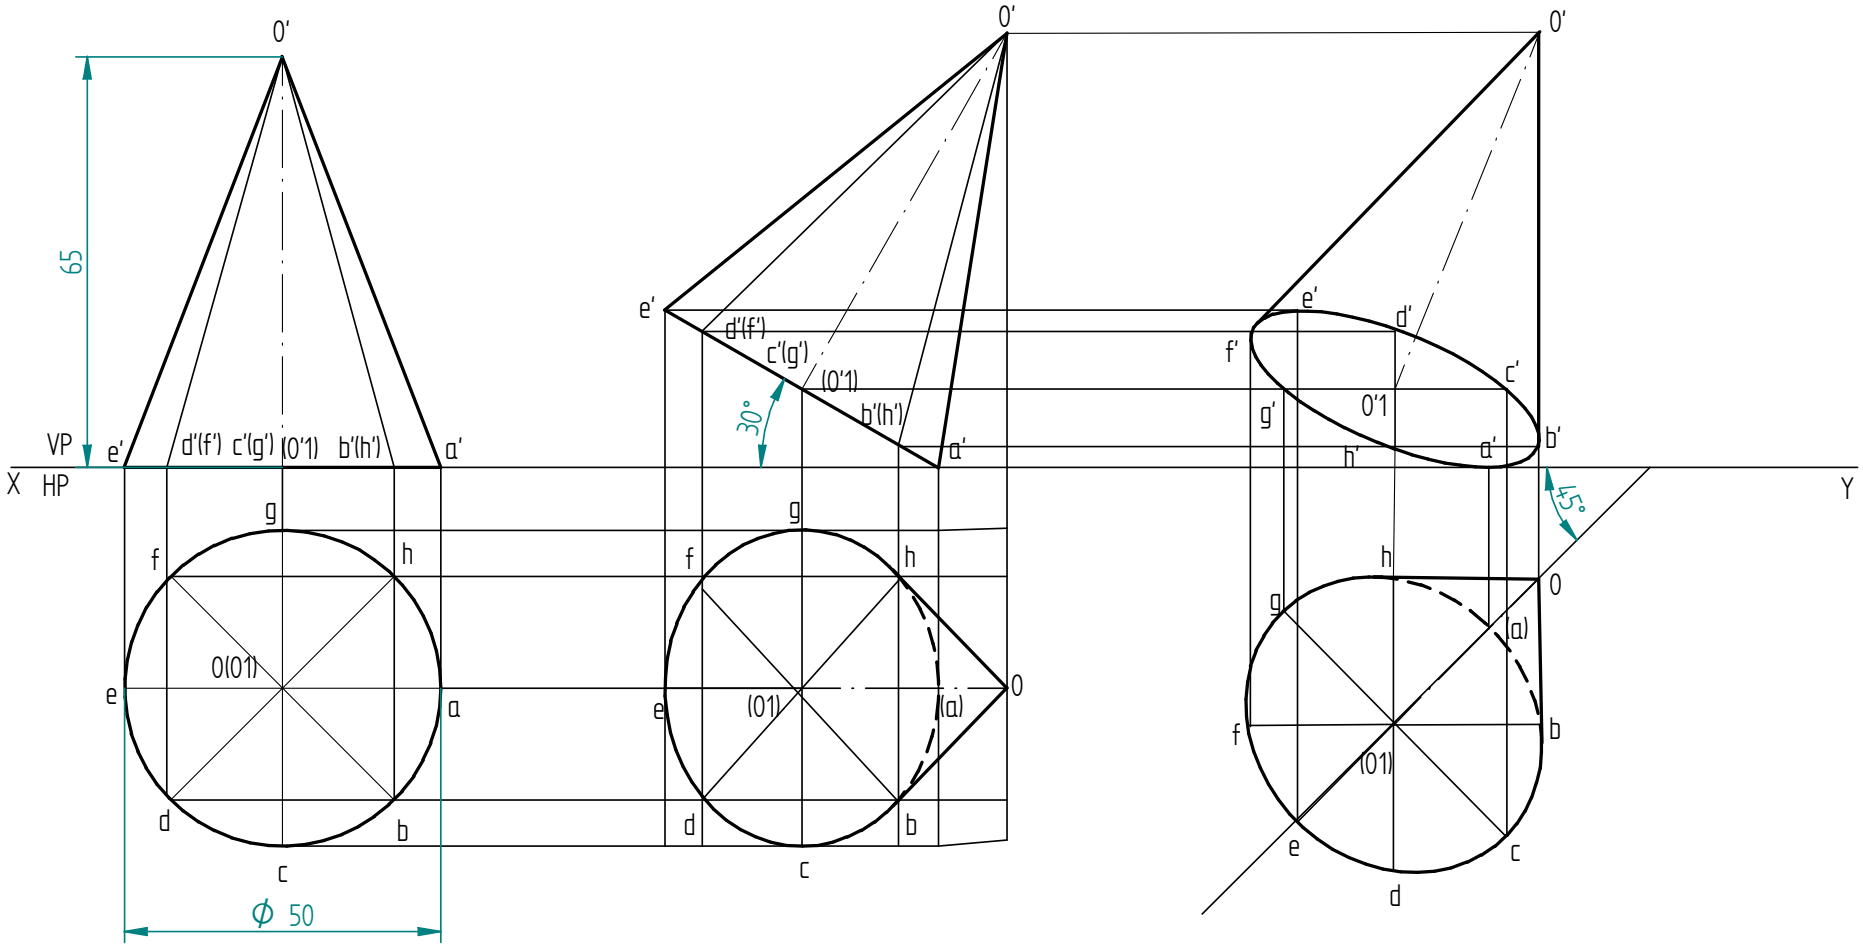

3.9 A pentagonal prism 25mm sides of base and 60mm axis length rests on HP on one of its corners of the base. Draw the projections of the prism when the axis of the prism is inclined to HP at 40º and appears to be inclined to VP 45º.

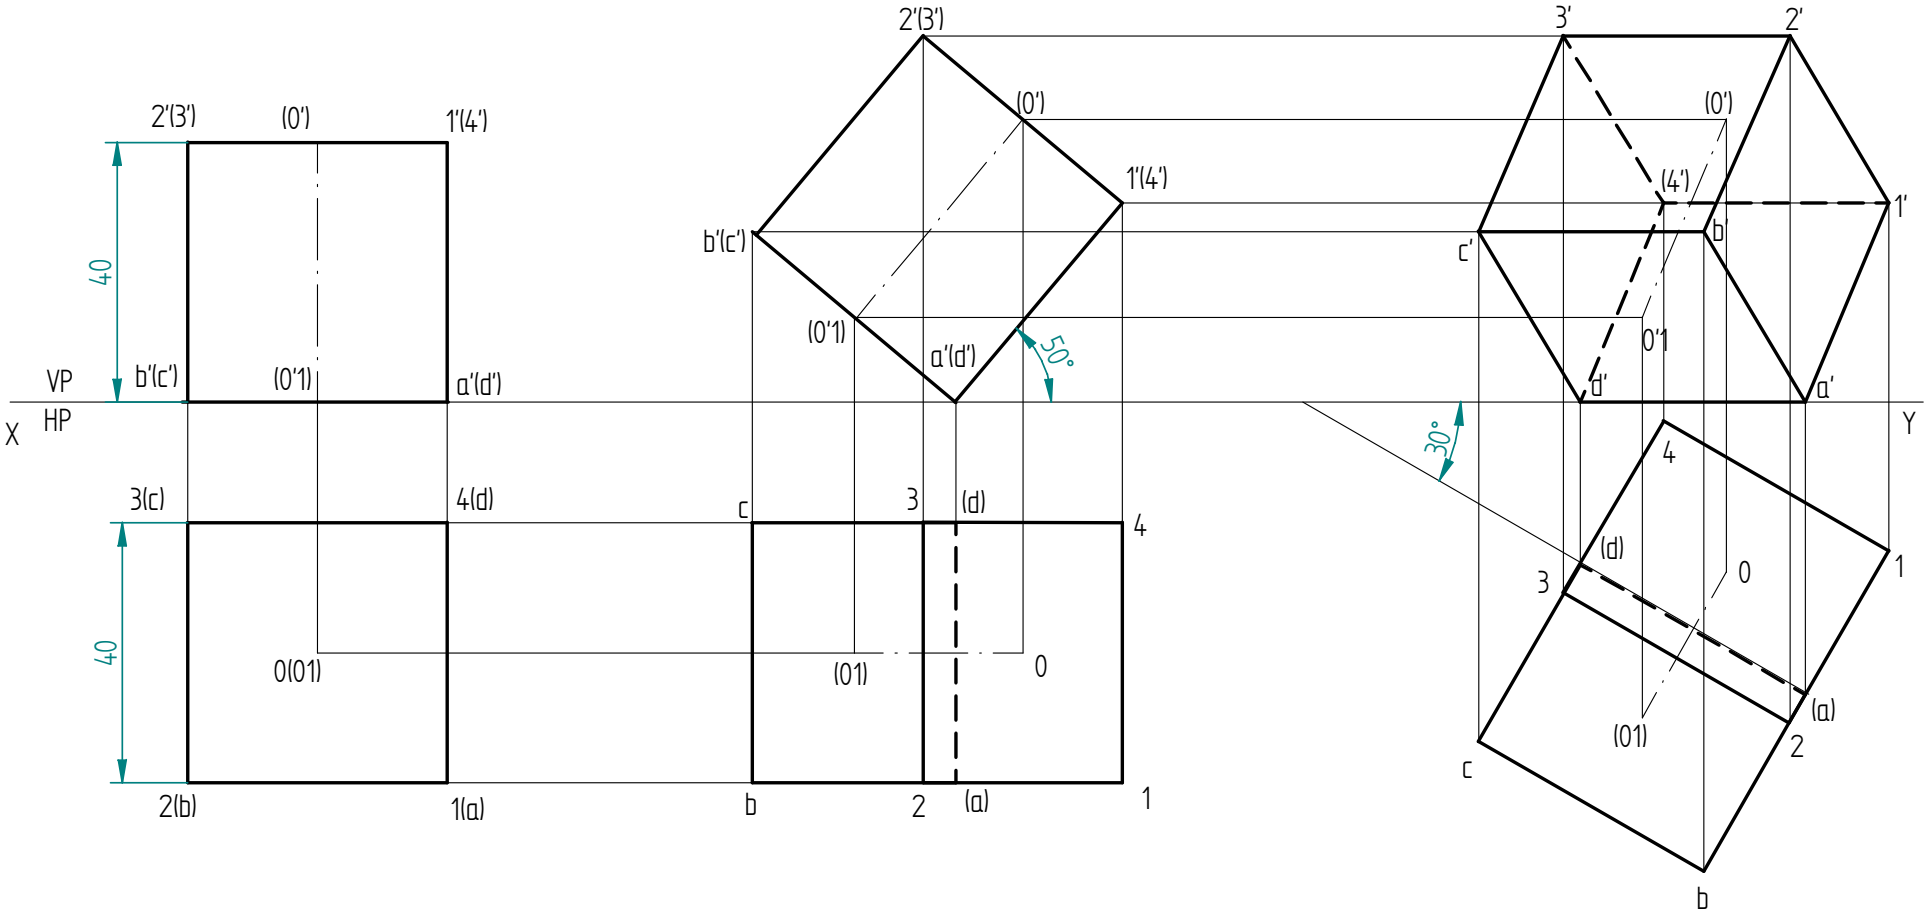

3.10 A hexagonal prism 25mm sides of base and 60mm axis length rests on HP on one of its edges of the base, which is inclined to VP at 30º. Draw the projections of the prism when the axis is inclined to HP at 45º.

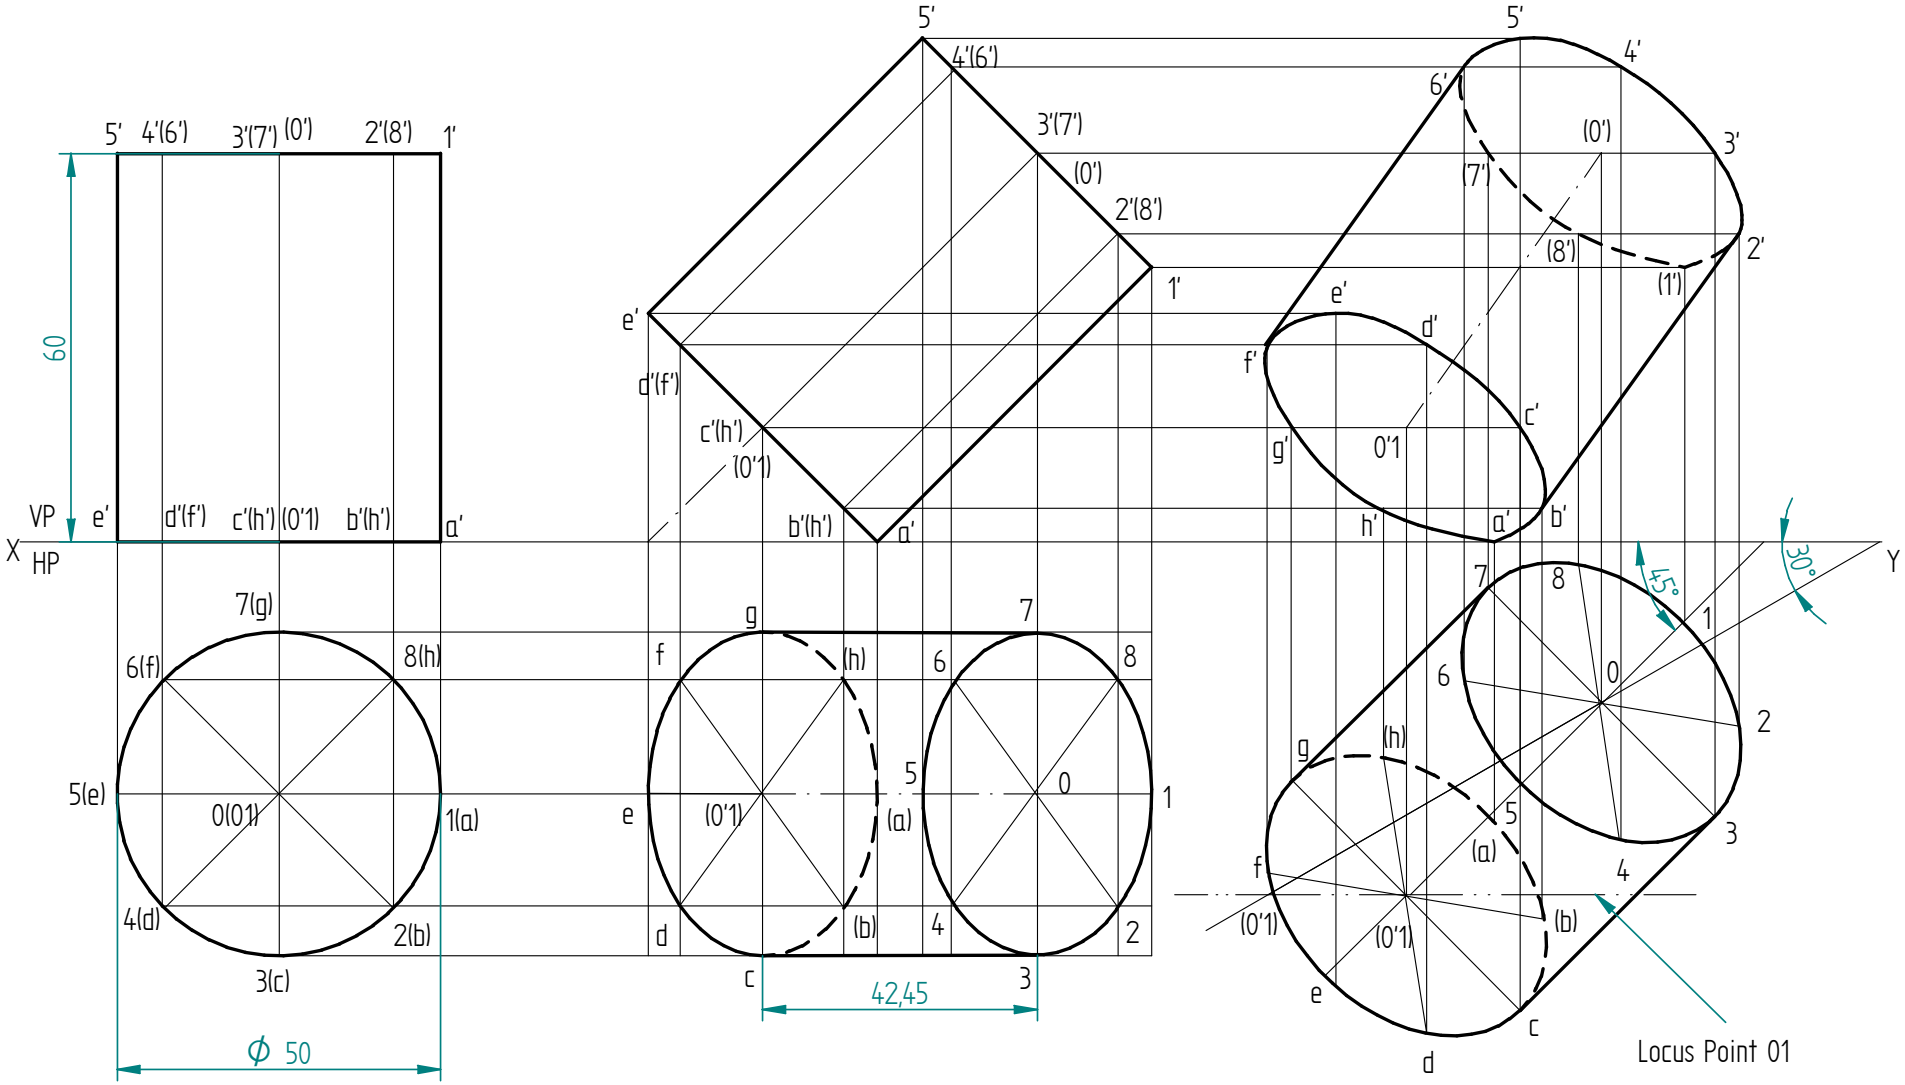

3.11 A cone of base circle diameter of 50 mm and 65 mm axis length is resting on a base point on HP. Base makes 30^0 to HP. Draw the projection of the cone when the axis appears to be inclined at 45^0 to VP.

3.12 A cube of 40mm sides rests on HP on an edge which is inclined to VP at 30º. Draw the projections when the lateral square face containing the edge on which it rests makes an angle of 50º to HP.

3.13 A cylinder of base circle diameter of 50 mm and 60 mm axis length rests on HP on one of its base point on HP with its axis inclined at 45^0 to HP and 30^0 to VP. Draw the projections.

3.14 A tetrahedron of sides 40mm is resting on one of its sides on HP. This side is parallel to VP and 40mm away from it. It is tilted about resting side such that the base containing this edge is inclined at 30^0 to HP. Draw the projections of the solid.
